

GAME OVER CO₂

SCIENTISTS ARE GAMIFYING
THE HUNT FOR GLOBAL
CARBON DIOXIDE

BY REJIMON K

Climate-science researchers from Arizona State University are now on a unique mission. They have started a hunt and have appealed to citizen scientists” to locate all the power plants around the world and quantify their carbon-dioxide emissions through a game.

Hosted on a website called “Ventus”— the Latin word for wind — the game has a simple interface that allows users to enter basic information about the world’s power plants.
